Useless Original Features (Count: 1): ['location']

These features carry no predictive signal and should be manually investigated.

This is typically a feature which has the same value for all rows.

These features do not need to be present at inference time.

Types of features in original data (raw dtype, special dtypes):

```

AutoGluon will gauge predictive performance using evaluation metric:

'mean_absolute_error'

This metric's sign has been flipped to adhere to being higher_is_better. The metric score can be multiplied by -1 to get the metric value.

To change this, specify the eval_metric parameter of Predictor()
